

Creating an efficient clinical workflow with Automatic Care Guidelines

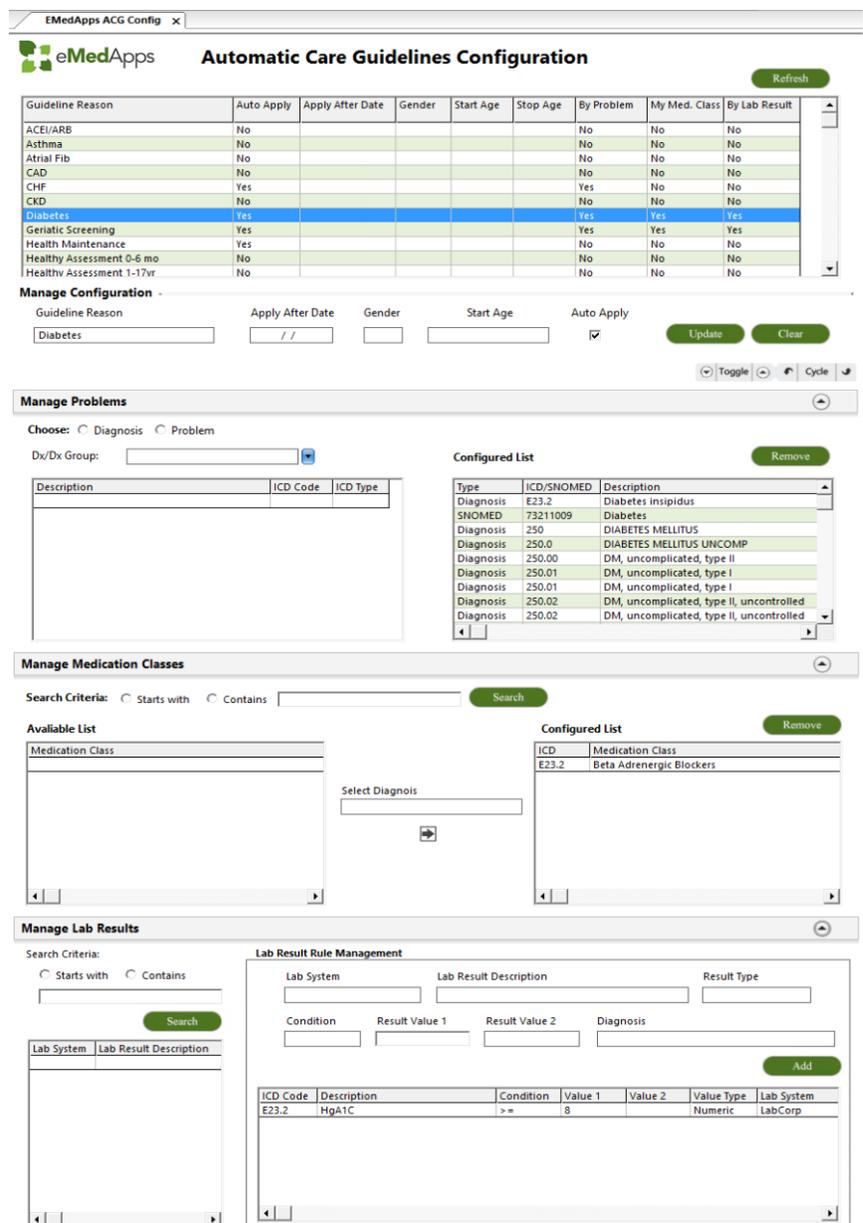

Desert Ridge Family Physicians
Practice Administrator, Dan Nelson

The Challenge:

Critical data from NextGen's Care Guidelines was missing or out-of-date on the Desert Ridge huddle report. The huddle report is an important workflow element that many clinics use to prepare for upcoming patient visits. For some clinics, the huddle report includes care guidelines information showing items due for each patient. NextGen updates the care guidelines when a patient's chart is opened. However, in this case the huddle report queries the database without opening a patient chart and therefore the care guidelines information was outdated.

The Solution:

Desert Ridge implemented eMedApps' Automatic Care Guidelines Solution which automatically applies care guidelines to the entire patient population. With this solution, guidelines are automatically applied each night based on criteria in the patient's chart, such as, problems, medications, and lab results so that the huddle report has updated and accurate information each day.

Automatic Care Guidelines Configuration

Guideline Reason	Auto Apply	Apply After Date	Gender	Start Age	Stop Age	By Problem	My Med. Class	By Lab Result
ACEI/ARB	No					No	No	No
Asthma	No					No	No	No
Atrial Fib	No					No	No	No
CAD	No					No	No	No

eMedApps Automatic Care Guidelines - Efficient Clinical Workflows

"Let's let the doctors be doctors and turn the computer into the reminder system that it's supposed to be. Let's do more for patients, and stretch their healthcare dollar. Avoid asking them to come in for a well exam in order to get a mammogram referral. We could do it at any visit, if the system just made it easy for us."

Dan Nelson, Practice Administrator, Desert Ridge Family Physicians

About Desert Ridge Family Physicians

Desert Ridge Family Physicians has a simple philosophy: They want to build long lasting relationships with their patients by providing exceptional medical care. They treat patients of all ages beginning at birth, and particularly enjoy treating families as a whole, the true essence of Family Medicine.

They offer comprehensive medical care to each patient treating a multitude of chronic medical conditions, acute illnesses, and even perform minor procedures in the office. They are committed to preventive medical care, and work together with their patients to ensure they are informed and remain current in this area of their health.

Their mission is to work as a team with their patients in making healthcare decisions so they may achieve optimal health. By partnering their knowledge of the most up to date health recommendations, they can support their patients as they strive to obtain their health goals.

About eMedApps™

eMedApps delivers patient-centric and vendor-neutral integration, interface, and business continuity solutions to healthcare delivery organizations across the U.S., enabling improved quality of care, increased EHR efficiency, and interoperability within and across the connected enterprise. With an ONC-ACB Certified Interface Engine and extensive industry expertise, eMedApps' Care Connectivity Platform™ is compatible with all major EHR vendors. eMedApps is headquartered in Schaumburg, Ill. with offices in San Diego, Houston, and Boston.
